

Track Mounted CME 550 All Terrain Rig

- Rig has the power, versatility, and dependability to handle geotechnical and environmental jobs with maximum efficiency – a drilling industry staple!
- The machine's large foot print & low centre of gravity make it ideal for navigating through difficult and remote terrains including forests and swampy areas.
- Low impact rubber tracks allow for damage free movement on paved surfaces and sensitive grassy areas.
- Ideal size and manoeuvrability allows for excellent access to confined sites and parking lots.
- Ideal for smaller diameter well installations, relatively shallow geotechnical drilling, pavement design investigations & sampling programs
- Short tower is ideal for use in limited overhead clearance projects (low clearance drilling).
- Able to drill solid and hollow stem augurs and can take on projects that involve rock coring (BQ or NQ), wash boring, and tri cones.
